

# UNIGUARD

an integrated access control/intrusion  
and fire detection platform

The Uniguard alarm supervision solution is the ideal response to all threats, whether you are an SME or a major corporation.

The Uniguard platform makes it possible to combine the security and safety infrastructure of several different buildings in a single graphical interface that can be accessed by several operators. Each intrusion or fire detection system communicates with the Uniguard platform via a communication port or via Ethernet. The user is kept informed in real time by a powerful tool for tracing alarms and events, and is no longer limited by geographical constraints.

## INTEGRATION WITH INTRUSION AND FIRE DETECTION SYSTEMS MAKES IT POSSIBLE TO\* :

- Manage multiple buildings
- Define what individual operators are allowed to do
- Differentiate between which operator manages which type of alarm (device, intrusion, fire etc.) at which management station
- Manage alarm points and groups (intrusion, fire, panic, hold-up, device, network etc.)
- Create schedules and processing priorities
- View statuses on plans (normal, deactivated, excluded, testing, configuring, hardware problem etc.)
- Associate video sequences with alarms (if CCTV integration is included)
- Receive different alarm types (intrusion, sabotage, hardware, pre-alert, alert)
- Send commands (arm, disarm, partially arm, forced arm, reset, enter test mode, leave test mode)
- Manage alarms using groups (alarm, sabotage, deactivation, test, hardware problem etc.)
- Generate processes (display, remote transmission, e-mail, SMS, siren, flash, commands, CCTV etc.)
- Control how events are acknowledged
- Allow operators to enter alarm reports
- Authorise forced arming
- Reset systems
- Zoom in on plans

\* depending on the systems

- Activate different access types
- Control cameras and domes if CCTV integration is included
- Poll at regular intervals to report on group statuses
- SIA level 2 protocol used
- Possibility of an enhanced communication (report to the security guard service, computer, mobile phone, ...)
- Each event is logged in a file

## THIRD-PARTY PLATFORMS SUPPORTED

- Galaxy G2, G3, Dimension
- Anb C2000-Bibus
- NetworX NX-8
- Others on request
